

# 6.10.0

01/10/2024 9:11 am BST

## Bugs, Bugs, Bugs

We don't talk much about bugs in the "What's New." Admittedly, we prefer to focus on the new, shiny features. And let's face it, we really despise those little pests. But it is worth pointing out, we are steadfast in their extermination! In fact, 88% of the bugs fixed in this July release were first identified in June! We just don't let them creep around for long. If you think you spotted a bug, please let us know. Contact us at [support@mestec.net](mailto:support@mestec.net). Please include screenshots. And we'll gladly get "squishing."

## By Customer Request...

- On the Quality Checklist function, prior to 6.10.0, each entry by an operator into the Checklist triggered a green confirmation pop-up. To promote entering data in rapid succession, we have eliminated the green confirmation pop-up on the Checklist.
- We have continued our enhancements to the re-authentication process for Single Sign-On users logged into multiple tabs. Users will now only experience one pop-up regardless to the number of tabs opened.
- We have added a Description field to Events.

## Coming Soon...

### Label Print

We are hard at work to deliver Label Printing. Expect to see major functionality enhancements in the coming quarter! What label printing issues do you run into? Share your stories with our Product Manager.

### MESTEC Chat

MESTEC Chat is currently in Beta. This feature is designed to enhance UX during the upgrade process. Chat will give system admins the ability to communicate directly to testers all around the shop floor.
