

Custom API Overview

26/06/2025 10:14 am BST

Tags: [custom api](#)

Eyelit offers integration with third-party applications through the use of a Public API. A series of endpoints are exposed and can be called by an external system (normally a middleware provider) to make changes directly within a given instance of the Eyelit software. The calls to these endpoints are performed through the use of pre-formatted JSON packets and are authorised through OAuth 2.0. For detail on the authorisation process, see [Authentication](#).

This documentation provides technical information on the endpoint available to call through the Eyelit MES-M Public API relating specifically to the 'Custom' functionality. The endpoint covered is listed in Table 1.

Table 1 - Summary of Custom-Related Public API Endpoints

| API Endpoint | High Level Description |
|---------------------|--|
| /api/Custom/Execute | Executes a custom transaction and returns a payload. |
