Tags: [document api](#) [document version api](#)

Eyelit offers integration with third-party applications through the use of a Public API. A series of endpoints are exposed and can be called by an external system (normally a middleware provider) to make changes directly within a given instance of the Eyelit software. The calls to these endpoints are performed through the use of pre-formatted JSON packets and are authorised through OAuth 2.0. For detail on the authorisation process, see [Authentication](#)

This documentation provides technical information on the endpoint available to call through the Eyelit MES-M Public API relating specifically to the 'Document' and 'Document Version' functionality. The endpoint covered is listed in Table 1.

Table 1 - Summary of Tool-Related Public API Endpoints

API Endpoint	High Level Description
/api/Document/Upsert	Creates a document or updates a document that already exists in MESTEC
/api/Document/List	Reads existing documents within MESTEC and returns a payload
/api/Document/Download	Finds and downloads a document that exists within MESTEC as binary content
/api/DocumentVersion/List	Reads existing document versions within MESTEC and returns a payload
/api/DocumentVersion/Upsert	Creates a document version or updates a document version that already exists in MESTEC
