Tags: document api document version api

Eyelit offers integration with third-party applications through the use of a Public API. A series of endpoints are exposed and can be called by an external system (normally a middleware provider) to make changes directly within a given instance of the Eyelit software. The calls to these endpoints are performed through the use of pre-formatted JSON packets and are authorised through OAuth 2.0. For detail on the authorisation process, see Authentication

This documentation provides technical information on the endpoints available to call through the Eyelit MES-M Public API relating specifically to the 'Document' and 'Document Version' functionality. The endpoints covered are listed in Table 1.

Table 1 - Summary of Tool-Related Public API Endpoints

API Endpoint	High Level Description
/api/Document/Upsert	Creates a document or updates a document that already exists in Eyelit MES-M
/api/Document/List	Reads existing documents within Eyelit MES-M and returns a payload
/api/Document/Download	Finds and downloads a document that exists within Eyelit MES-M as binary content
/api/DocumentVersion/List	Reads existing document versions within Eyelit MES-M and returns a payload
/api/DocumentVersion/Upsert	Creates a document version or updates a document version that already exists in Eyelit MES-M
